

NeuroMem for Neuro-MEMS

Bridging the gap between sensors and
actuators with Neuromorphic Memories

The missing brain

Biologically inspired...

The brain is a repository of experiences associating stimuli to actuators

massive parallel wiring!

10 Billions neurons
100 Hz
25 Watts

Patented time domain multiplexing

NeuroMem is a parallel neural network associating input patterns to categories

1024 neurons
27 Mhz / 0.5 Watts

256 8-bit inputs

262,144
Synapses/chip
(256 * 1024)

32,766 outputs

Decision = Non linear classification

Input parameters =

- Voltage,
- Torque,
- Temperature,
- Vibration
- and more

Class =
Operation modes such as

- Warm up
- Light load
- Medium load
- Heavy load
- Cool down

History of classifiers

1960: Threshold method

Too simple and not non-linear

1980: Perceptron method

Too complex,
and time consuming

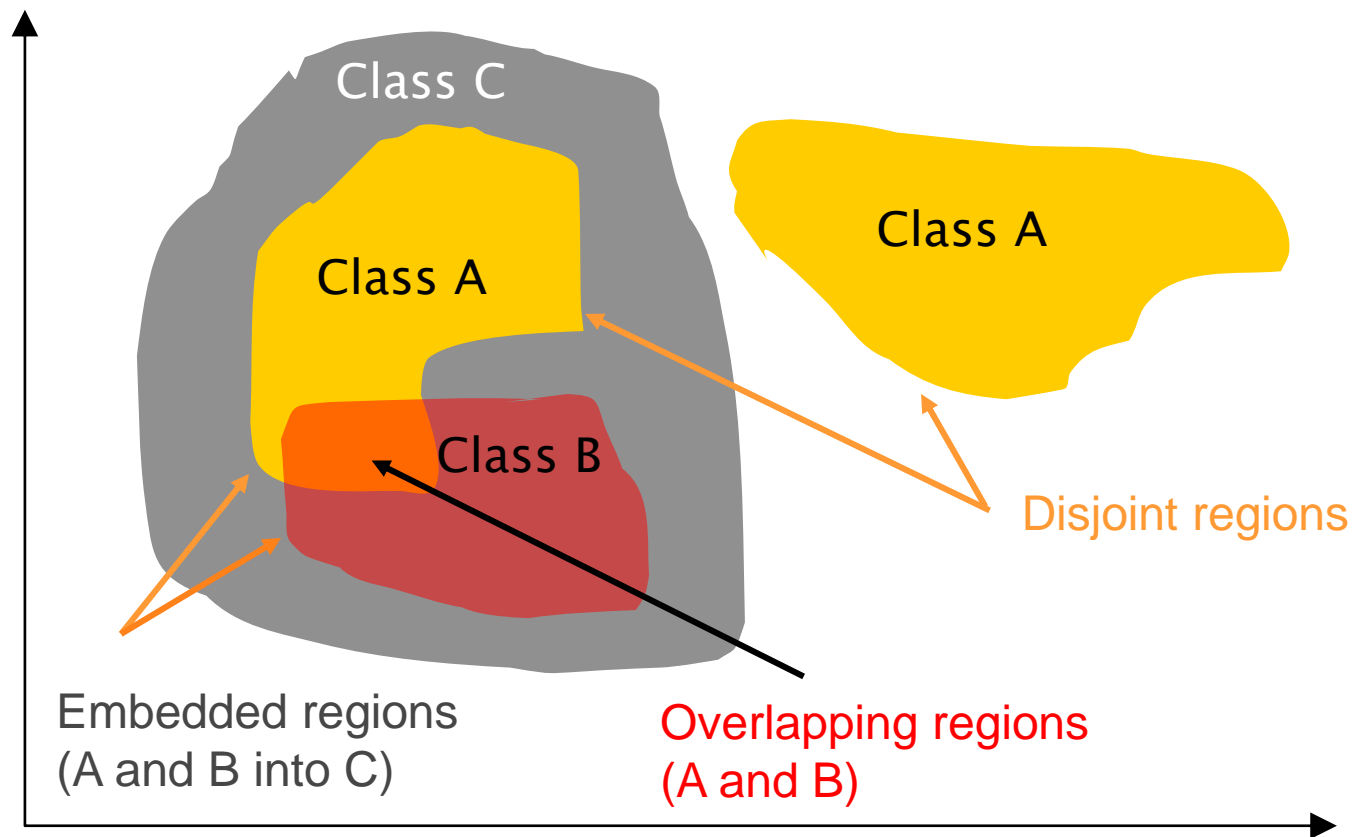

1990: Radial Basis Function

Map spaces of any shape
with the relevant training
set

The power of a non-linear classifier

Radial Basis Function to associate and discriminate complex and large datasets

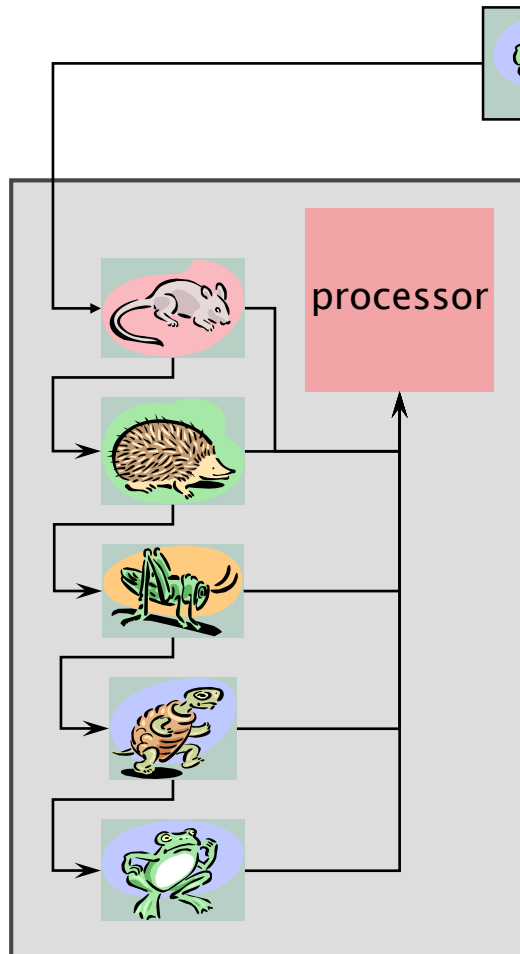

The power of parallelism

CPU/DSP

1 processor for many memory entries

Recognition in N cycles per entry UNTIL the right one is found

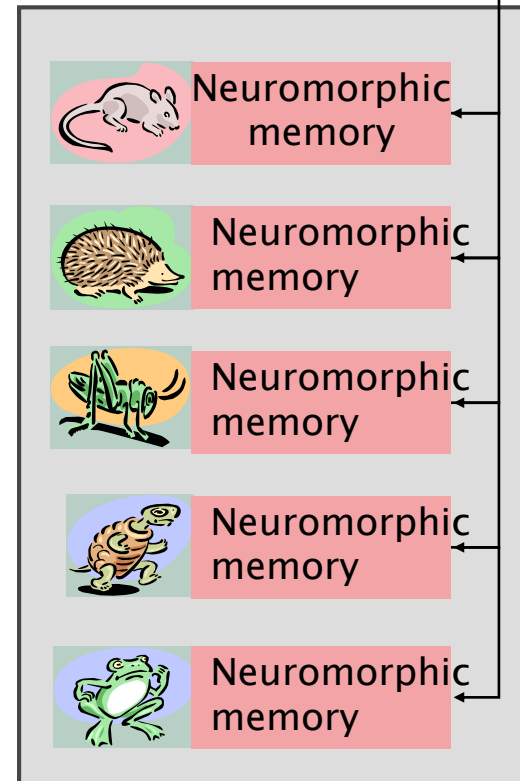

Where is it?

NeuroMem

Many memories with their own processing unit

Recognition in 16 cycles \forall number of entries

The power of small foot print and low power

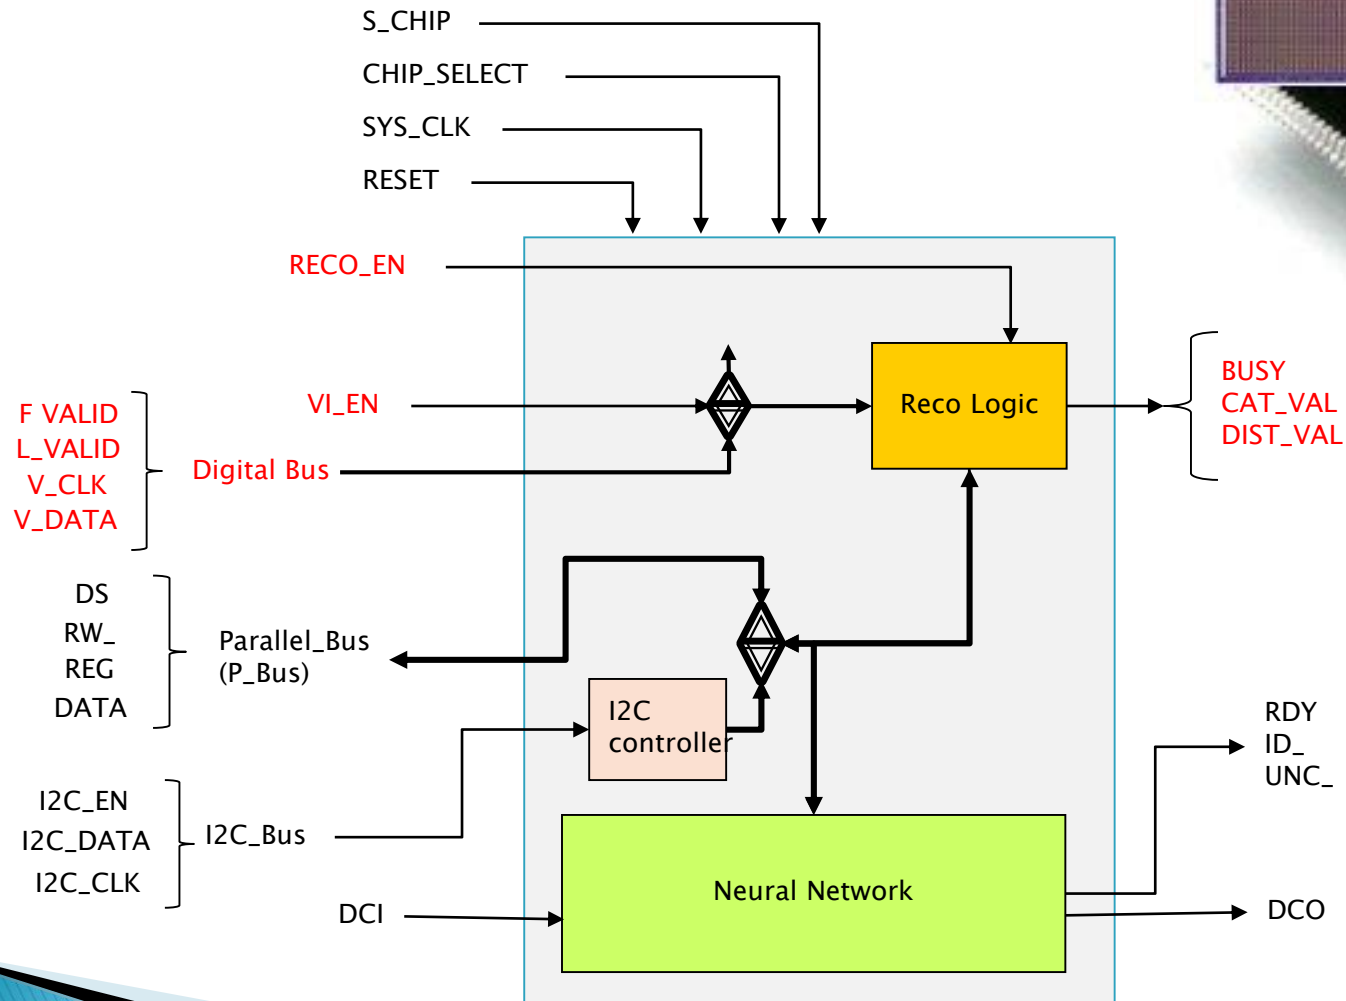

Example: Predictive Maintenance for Ball Bearing

Semi-supervised learning

Logging of abnormal vibrations

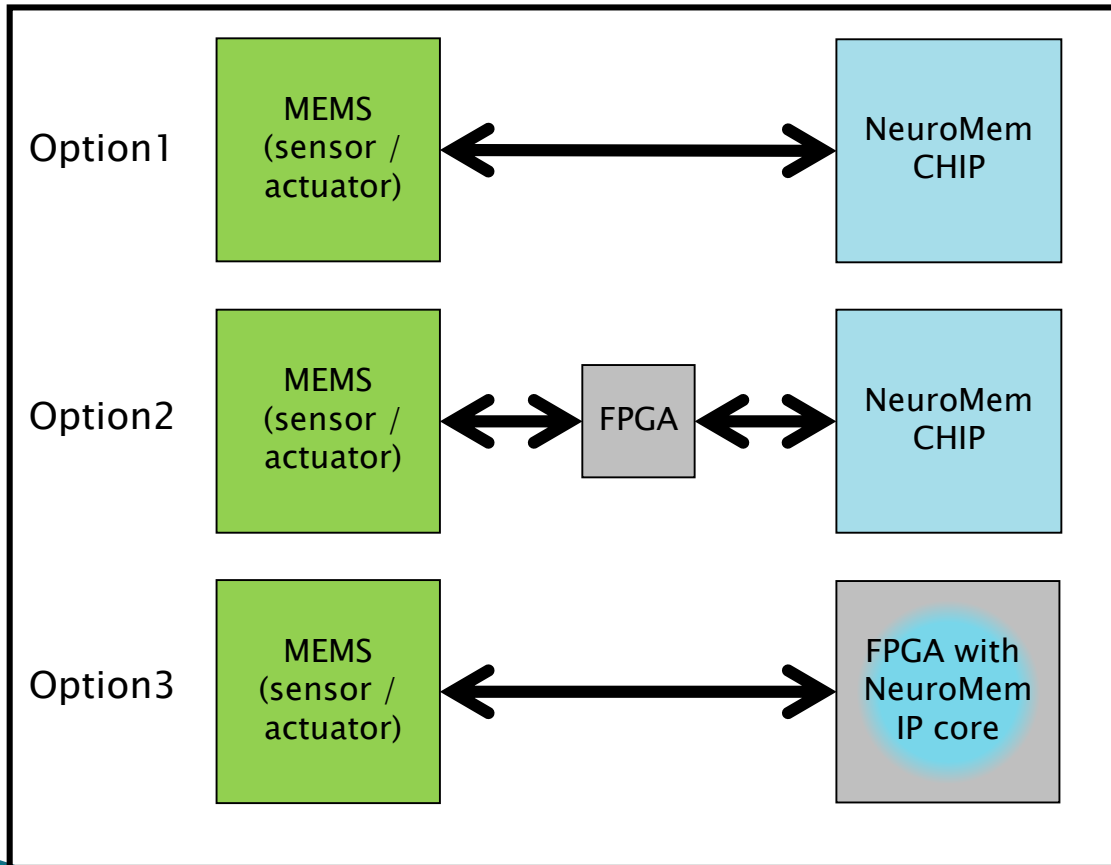

Novelties can be reviewed at later time and added to knowledge

CM1K I/O configuration

The Neuro-MEM concept

Today: multi-chips solution

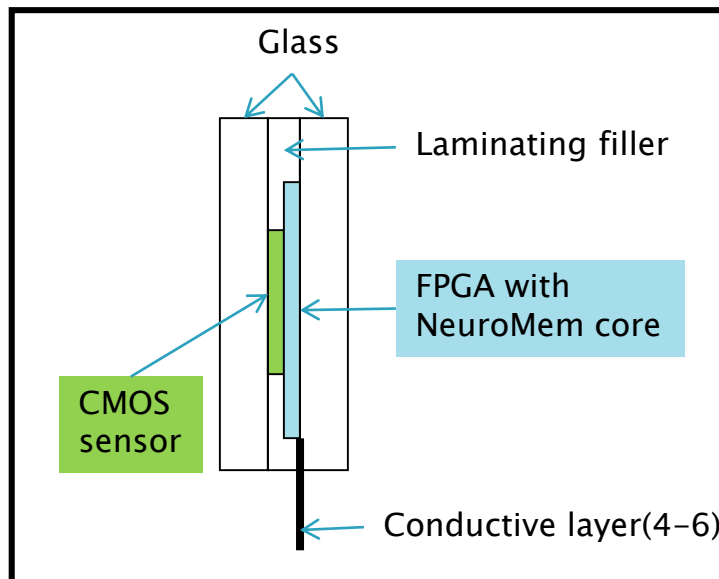

Tomorrow: SOC

Beyond Neuro-MEMS: Intelliglass

Today: multi-chips solution

Tomorrow: SOC

Biotech and Environmental Sciences

As a MicroArray reader

As a Lab-On-Chip

Consumer and mobile devices

- ▶ 3D Gesture human machine interface
- ▶ Activity monitoring
- ▶ Blood pressure monitoring
- ▶ Gaze tracking

Building and Infra-Structures

- ▶ Door control
- ▶ Glass breakage detection
- ▶ Crack detection
- ▶ Smoke detector

- ▶ Developer of the NeuroMem Technology
 - Owner of the CM1K chip (1024 neurons)
- ▶ Developer of the CogniSight Technology
 - Image analytics based on NeuroMem hardware
 - Adaptive, trainable, high speed, low power
- ▶ Evaluation tools
- ▶ Technology Transfer
- ▶ IP Licensing (FPGA, ASIC)
- ▶ www.general-vision.com
