The Road Ahead: Outlook for the Industry

E. Jan Vardaman, Founder and President

- Track Innovation
- Identify Trends
- Analyze Growth
- Influence Decisions

Relevant, Accurate, Timely
Industry Trends

- **Traditional unit growth markets slowing....**
  - PC sales declining (additional sales gated by Intel’s inability to fab parts)
  - Smartphones low growth, but slight improvement for year end totals
  - Shift in interconnect from WB to FC for DRAM, especially in server market continues
  - DRAM expansion slowing but transition to FC continues
- **Cryptocurrency drove unit volume growth end of 2017, but lower growth this year**
- **AI and HPC drives high-performance packaging**
  - Driving Si interposer and FO on substrate
  - Drives HBM
  - High $ value, but low unit volumes
- **Increased electronic content in automobiles with ADAS and growth in EV**
CAPEX Spending Will Be Lower than Projected

Global growth projections lower from 3.9% to 3.7% for next year

CAPEX spending will slow to lower than projected
– Samsung has announced it will reduce spending for DRAM, considers DRAM at peak
• DRAM CAPEX spending will slow (will be lower than $22.9 projection), but transition from WB to FC will continue
  – Samsung has announced plans to lower spending (maybe 20% lower)
Shift in Memory Packaging and Interconnect Changes

**TSOP**

**FBGA**

**Wire Bond**

**Flip Chip**
Global Smartphone Shipment Forecast

- **IDC expects global smartphone shipments to decline 0.7% from 2017 to 2018**
  - Positive growth for second half of 2018
- **Growth increasing in 2019**
  - Drives SiP volumes

Source: IDC
Cryptocurrency: Is it a Windfall???

- Need high-performance processing capability with power efficiency
- ASICs based on 10nm semiconductor node moving into production
  - Smaller body size, drives FC-CSP volumes
  - 40% of ASICs obsolete in one year = big replacement cycle and no need for long term reliability
- Contributed to strong industry growth in 2017
  - Last year ~750 million units (flip chip BGA and CSP), contributed to capacitor shortage
  - Not as strong this year
- Major players
  - Major OSATs including China OSATs (Huatian, TFME, and JCET)
Growth in Server Market

- Demand for datacenters from Alibaba Group Holding (China), Amazon, Apple, Google, Microsoft, Facebook, and Tencent Holdings (China) to run retail operations, search engines, cloud services, and social networks over the Internet
- Demand for high-performance chips for data crunching drives demand for advanced packaging (flip chip packages)
  - Intel Xeon server processors for example (high dollar value)
  - Intel accounts for ~95% of server market, but AMD is gaining ground!
- Demand for data storage driving growth in Flash memory (SSD)
- Demand for DRAM in DIMMs
Datacenter Impact on Semiconductor Industry

- **Datacenter growth continues**
  - Last year Amazon, Google, Facebook, and Microsoft spent $40 billion on new plants and equipment

- **Drives demand for fast DRAM for servers and flash memory for storage**

Source: Macquarie Capital.
Samsung’s 128GB RDIMM uses DDR4 memory with TSVs

- Targeted for datacenters
  - Lower power
  - Double capacity of originally 64GB LRDIMM developed for Enterprise servers
What is Artificial Intelligence (AI)?

- **Artificial Intelligence**: Theory and development of computer systems able to perform tasks that normally require human intelligence
  - Visual perception and pattern recognition
  - Speech recognition
  - Decision-making
  - Natural language processing and translation

- **Machine Learning**: Branch of AI in which computers learn from data without human assistance

- **Deep Learning**: Type of machine learning that trains a computer to perform human-like tasks
  - Recognizing speech, identifying images, or making predictions
  - Sets up the parameters about the data and trains the computer to learn on its own by recognizing patterns using many layers of processing

Source: IBM.
AI Chips See Increased Demand

• TSMC reports that more than 300 million smartphones shipped with built-in AI (refers to speech recognition etc.)
• Silicon content in smartphones expanding with adoption of facial recognition and new applications such as AR, VR, and 3D video
• Increased computing for automotive ADAS will use AI in future
• AI accelerators in datacenters to increase from 15% today to 50% by 2020
  – TSMC reports a 4X growth in AI accelerators since 2016 to 800,000 units in 2018

Source: NVIDIA.

Source: Intel.
Where Do We Find AI and What Package Types are Required?

**Accelerators for datacenters**
- Google (ASIC + HBM2 on Si interposer)
- NVIDIA (GPU + HBM2 on Si interposer)
- Intel Nervana (ASIC + HBM2 on Si interposer)
- Intel Stratix 10 (FPGA + HBM2 on EMIB)
- Xilinx UltraScale+ (FPGA slices + HBM2 on Si interposer)
- Baidu (ASIC + HBM2 on Si interposer)

**Automotive autonomous driving**
- NVIDIA DRIVE PX Pegasus (4 GPUs packaged in FC-BGAs on a board)

**Smartphones processors with AI features**
- Apple A11 Bionic (InFO FO-WLP)
- Huawei Kirin 970 (flip chip in MCeP PoP)
- Samsung Exynos 9810 (flip chip on 1-2-1 SLP substrate with embedded passives, PoP)
- Qualcomm Snapdragon 845 (flip chip in MCeP PoP)
Google Tensor Processing Unit v2 with Interposer and HBM

- **Google-designed device for neural net training and inference**
  - 16 GB of HBM
  - 600 GB/s memory bandwidth
- **ASIC + HBM on Si interposer using TSMC’s CoWoS**

- **Version 3, introduced in May 2018, doubles the HBM**
VIRTEX UltraScale+™ silicon interposer with TSVs using TSMC’s CoWoS
- Interposer as large as 30 mm x 36 mm
- Metal line stitching used for larger than reticle interposer products
- 3 Cu metal layers plus 1 Al layer
- <1μm lines and spaces
- Thickness of 100 μm

Approximately 660,000 interconnects in the module

Source: Xilinx.
Samsung Foundry Business Seeing AI Customers from China

- Samsung picks up AI chip design business from China design houses
  - Baidu’s Kunlun AI accelerator for datacenters
  - Fabricated at Samsung on 14nm semiconductor node
- ASIC and HBM2 on a Si interposer
  - Driving Si interposer and HBM expansion
  - Driving interposer assembly

Source: Baidu.
Embedded Multi-die Interconnect Bridge (EMIB) A small silicon bridge chip is embedded into the package (no TSVs)
- Package substrate provided by substrate supplier (does Si bridge embedding)
Considered less expensive because only small area for high-density silicon and no TSVs
EMIB allows the die I/O or bumps to be placed as close as possible to the edge of the die because fewer I/O or bumps are required
- Micro bumps on chips, communication between chips through interposer
Good electrical performance is reported due to the short interconnects
Automotive Semiconductor Content Growth due to ADAS

Average ADAS* semiconductor content per level of automation

Level 2: 2015-2020 (up to 30 million vehicles per year)
Level 3: 2020-2025 (up to 10 million vehicles per year)
Level 4: 2025-2030 up to 5 million vehicles per year

In addition to current $300/car average

Source: Infineon.

Autonomous Vehicle Platform

Autonomous vehicle platform: a functional diagram

Sense

- Raw data
  - GPS
  - Cameras
  - Radars
  - 3D Scanning Lidars
  - Ultrasound sensors

Understand

- Object parameters
  - Time stamp
  - Dimensions
  - Position/velocity
  - V2V / V2I comm.
  - "Maps" a priori info
  - 3D Map

Act

- Actions
  - Do nothing
  - Warn
  - Complement
  - Control
  - Driver state

- Vehicle Controls
  - Brake/acc
  - Steering
  - etc.

Visualization/Display Sub-system

Compressed data
NVIDIA’s AI Platform for Autonomous Driving

- NVIDIA’s AI solutions for autonomous driving include “Pegasus”
  - GPU packaged in FC-PBGAs
  - Package size up to 42.5 mm x 42.5 mm
- NVIDIA® HGX-2™ fuses AI and high-performance computing into a single platform
- Thermal performance important

Source: NVIDIA.
FO-WLP on Substrate: Network Switch, Potential AI

- **Amkor’s Silicon Wafer Integrated Fan-out Technology (SWIFT®)**
  - RDL with 2/2μm L/S
  - Up to 3 RDLs plus UBM

- **ASE’s Fan-Out Chip on Substrate (FOCoS)**
  - RDL with 2μm/2.5 L/S
  - Up to 3 RDLs plus UBM
  - High I/O (>1,000)
  - In production for Hi-Silicon since 2016

- **TSMC Integrated Fan-Out WLP on Substrate (InFO_oS)**
  - RDL with 2μm L/S
  - Up to 3 RDLs plus UBM
  - In production for MediaTek switch (split die)

Source: ASE.

Source: Amkor.
WLP Growth

- **Number of fan-in WLPs in many phones continues to increase**
  - Apple, Samsung, and China handset makers
- **Fan-in WLP for many products**
  - Wearables such as smartwatches
Market for Wearables

- IDC expects increase of 6.2% for wearables market this year to 122.6 million units
  - CAGR of 11.6% for 5-year forecast
- Wearables include
  - Watch (largest segment)
  - Wristband (second largest segment)
  - Earwear
  - Clothing
- Small market compared to smartphones, but growing market
Migration to FO-WLP

FC-CSP

Fan-in WLP

FO-WLP (many versions)

Silicon Interposer (Data center, networking)

Fan Out Chip on Substrate Package
Growing Number of FO-WLP Applications (Red is Panel)

- Baseband processors
- Application processors
- RF transceivers, switches, etc.
- Power management integrated circuits (PMIC)
- Connectivity modules (IoT)
- Radar modules (77GHz) for automotive
- Audio CODECs
- Microcontrollers
- Logic + memory
  - Data center servers, networking, AI etc. (Fan-out on substrate)
  - Future AP + DRAM for mobile
- Sensors (fingerprint, image, etc.)
- LED
- Many multi-die configurations

Source: Nanium.

Source: Nepes.
Consortia and Companies Working on Panel FO-WLP

- **Companies**
  - SEMCO in Korea
  - Nepes in Korea
  - Powertech Technology (PTI) in Taiwan
  - Unimicron in Taiwan
  - ASE/Deca in Taiwan

- **Consortia**
  - Fraunhofer IZM
  - FOPLP Consortium (ASMPT promoting) in Hong Kong
  - IME A*STAR in Singapore
  - ITRI in Taiwan
  - NCAP in China
  - Jisso Open Innovation of Tops in Japan (New)
Panel-Level FO-WLP Activity

- PTI is in production with its panel FO-WLP line
  - PMIC from MediaTek
- SEMCO in production with panel FO-WLP for Samsung Gear watch
  - Application processor and PMIC with backside RDL
  - PoP
  - Thin solution
- NEPES in production with panel FO-WLP for fingerprint sensors
- Unimicron continues R&D activity for panel
- YOUR NAME HERE
China and OSAT Growth

- China’s economy show signs of slower before Trade War
  - 6.5% growth in Q3 vs. Q2 growth of 6.7%
- Capacity expansion still underway
- Domestic OSAT capacity expansion not always driven by demand requirements
  - Government continues to drive expansion of semiconductor industry and infrastructure
  - ZTE’s experience confirms the need for China domestic industry expansion
- Will we get overcapacity?
- JCET
  - New CEO
  - Capacity addition for bumping with SMIC JV
- Tongfu Microelectronics
  - Adding capacity for bumping and WLP
- Huatian
  - Adding capacity for bumping and WLP
Conclusions

• **Economic trends**
  – Some slowing next year
  – Will result in pull back on some expansion
  – Uncertainty created by trade-war, but China expansion continues

• **Smartphones still account for large unit volumes**
  – SiP
  – WLP and FO-WLP

• **DRAM transition from WB to FC**
  – Memory has large unit volumes

• **AI**
  – Watch datacenter growth
  – AI accelerators demand increasing, drives silicon interposer and HBM

• **Automotive electronics growth, but takes time**
  – Reliability is key

• **WLP growth continues for fan-in and FO-WLP**

• **Panel FO-WLP activity is increasing**
  – Production examples
  – Additional plans
Thank you!
